

Lighting Design Group

SELECTED PROJECT EXPERIENCE

COMMERCIAL - ASIA

CD+M Lighting Design Group is an international lighting design consultancy comprised of designers whose work encompasses a variety of markets. Our award-winning design team has extensive experience creating innovative custom lighting plans to enhance architectural environments. Our clients include leading architects, interior designers and developers in more than 20 countries worldwide.

With staff in the US, UAE, UK and PRC, our designers are fluent in multiple languages, maintain close ties to global manufacturers and suppliers and have an excellent understanding of how to integrate lighting into both architecture and landscaping.

PROCTER & GAMBLE BEIJING INNOVATION CENTER, BEIJING, PRC

Completed in August 2010, Procter & Gamble's \$70 million Beijing Innovation Center is the company's sixth research facility worldwide. The facility supports P&G's global business, with its primary focus on development in emerging markets. CD+M provided specialized lighting consulting for the development including designing the centerpiece for the Beijing headquarters, a spectacular LED chandelier spanning the facility's five-level lobby.

CATIC AVIC TOWER, SHENZHEN, PRC

The 216 M tall AVIC Center tower book-ends the mixed-use CATIC City Shenzhen development. The total GFA for this project is 250,000 SM, including a shopping mall and a super high-rise office tower. The design team created a number of green strategies to meet sustainability goals, such as a green roof and an energy-efficient façade. CD+M designed the architectural facades, landscape & interiors for the overall project.

LENOVO HEADQUARTERS, BEIJING, PRC

At the core of the lighting design team's plans for Lenovo's new Global Headquarters is the Owner's commitment to receive both LEED Gold and CHINA Green Building 3 Star status. The fundamental concept of the lighting scheme is to deliver natural light into as many interior spaces as possible, and supplement with state-of-the-art artificial lighting only where necessary. An Advanced Intelligent Lighting System is integrated throughout the campus, detecting motion and light levels, enhancing and refining as necessary to meet the task lighting needs for each unique space.
